Queries in SQL

- `select` does not eliminate duplicates

  ```
  select dept_name
    from instructor
  ```

- Explicitly specify that duplicates should
  be removed — additional computation,
  so avoid if not needed

  ```
  select distinct dept_name
    from instructor
  ```

Queries in SQL — string comparison

- Can match patterns in strings

  ```
  select name
    from instructor
      where dept_name like "Phy%"
  ```

- `%` matches any substring (zero or more)

- `_` matches any character

- Name containing `ri` but not at the end

  ```
  select name
    from instructor
      where name like "%ri_%"
  ```
