

**COMBINATORICS 1**  
**ASSIGNMENT 5**  
**(DUE DATE: 24/10/2016)**

- All posets are finite and graded.
- An arrangement of hyperplanes in  $\mathbb{R}^n$  is a finite collection  $\mathcal{A} = \{H_1, \dots, H_k\}$  of hyperplanes.
- The characteristic polynomial of a hyperplane arrangement  $\mathcal{A}$  is defined as

$$\chi(\mathcal{A}, x) := \sum_{s \in L(\mathcal{A})} \mu(s) x^{\dim s}.$$

- Braid arrangement in  $\mathbb{R}^n$  is given by

$$A_{n-1} = \{x_i - x_j = 0 \mid 1 \leq i < j \leq n\}.$$

- The type B arrangement is given by

$$B_n = A_{n-1} \cup \{x_i + x_j = 0 \mid 1 \leq i < j \leq n\} \cup \{x_i = 0 \mid 1 \leq i \leq n\}.$$

- For a natural number  $a$ , define  $[-a, a]_{\mathbb{Z}}^n = [-a, a]^n \cap \mathbb{Z}^n$ .

- (1) (10 points) Let  $W$  be a  $k$ -subspace of  $\mathbb{R}^n$ . Then prove that

$$|W \cap [-a, a]_{\mathbb{Z}}^n| = |[-a, a]_{\mathbb{Z}}^k|$$

if and only if  $W \in L(B_n)$ .

- (2) (15 points) For a hyperplane  $H \subset \mathbb{R}^n$  given by the linear form  $f(x) = \alpha$  define the cone over it as the hyperplane  $cH$  in  $\mathbb{R}^{n+1}$  given by the linear form  $f(x_1, \dots, x_n) - \alpha x_{n+1} = 0$ . Let  $\mathcal{A}$  be a non-central arrangement then the cone over this arrangement is

$$c\mathcal{A} = \{cH_1, \dots, cH_k, x_{n+1} = 0\}.$$

Prove that

$$\chi(c\mathcal{A}, x) = (x - 1)\chi(\mathcal{A}, x).$$

- (3) (15 points) Let  $G$  be a graph and  $\mathcal{A}_G$  be the associated graphic arrangement. Suppose that  $G$  has  $m$ -element clique, i.e.,  $m$  vertices such that any two are joined by an edge. Show that  $m! \mid r(\mathcal{A}_G)$ .
- (4) (10 points) An arrangement of type D is defined as

$$D_n = A_{n-1} \cup \{x_i + x_j = 0 \mid 1 \leq i < j \leq n\}.$$

Find the number of chambers of  $D_n$ .
