

Algorithms for CTL

B. Srivathsan

Chennai Mathematical Institute

Model Checking and Systems Verification

January - April 2016

Module 1: Adequate CTL formulae

Recap of CTL

State formulae

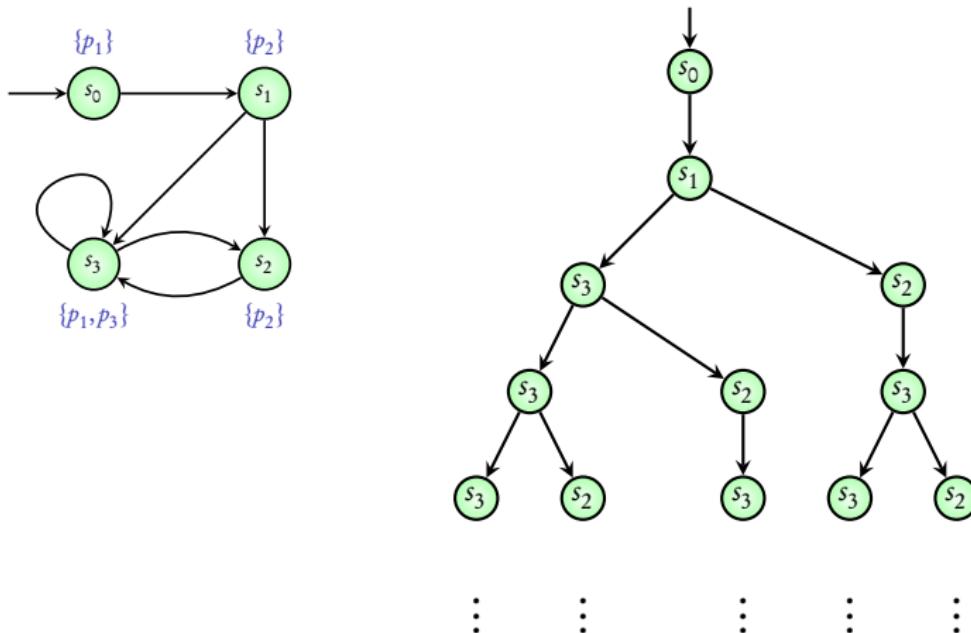

$$\phi := \text{true} \mid p_i \mid \phi_1 \wedge \phi_2 \mid \neg\phi_1 \mid E \alpha \mid A \alpha$$

$p_i \in AP$ ϕ_1, ϕ_2 : State formulae α : Path formula

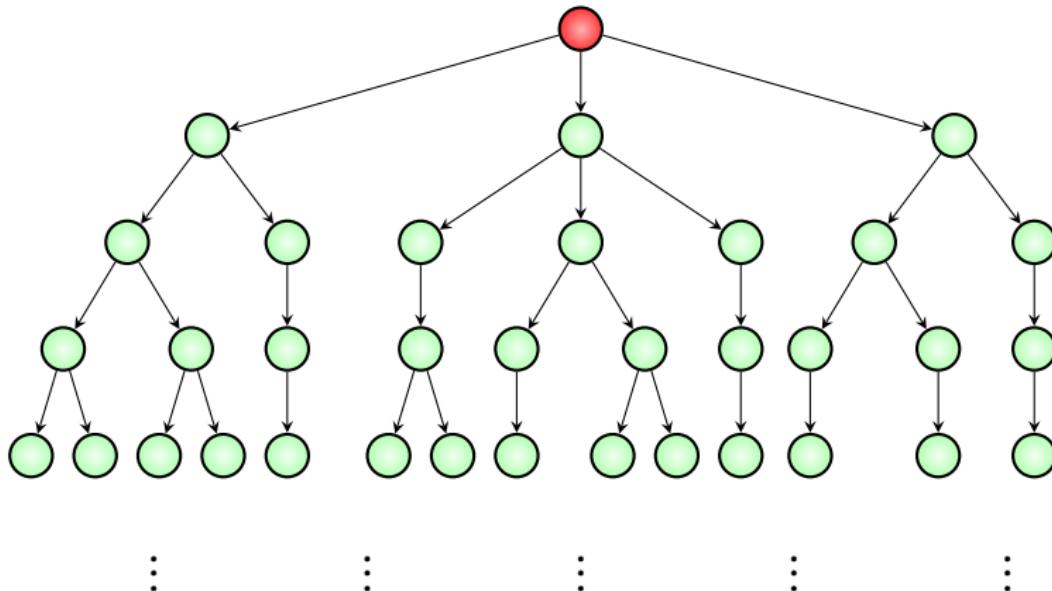

Path formulae

$$\alpha := X \phi_1 \mid \phi_1 U \phi_2 \mid F \phi_1 \mid G \phi_1$$

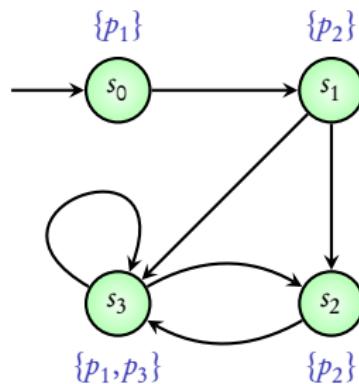

Transition system satisfies CTL state formula ϕ if its **computation tree** satisfies ϕ

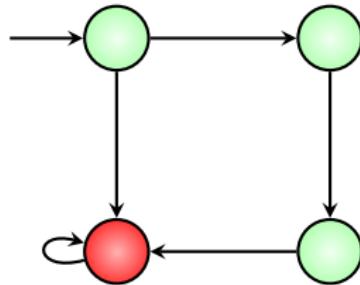

A tree satisfies CTL state formula ϕ if its root satisfies ϕ

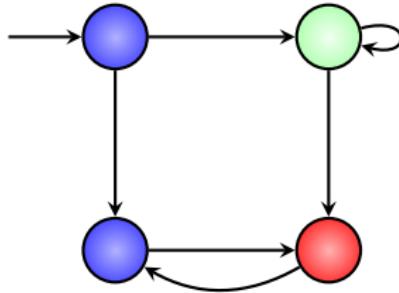

A **state** s in a transition system satisfies a CTL formula ϕ if the computation tree **starting at** s satisfies ϕ

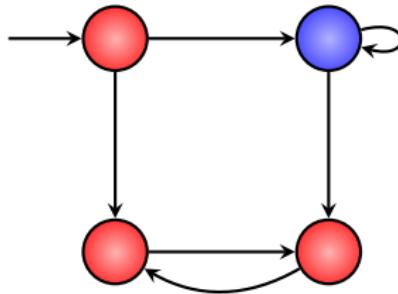

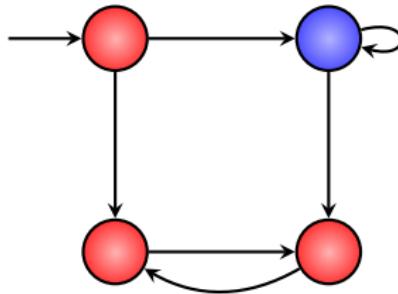

Above transition system satisfies **E X red**

Above transition system satisfies $E \text{ blue} \cup \text{red}$

Above transition system satisfies **E G red**

Above transition system satisfies **E G red**

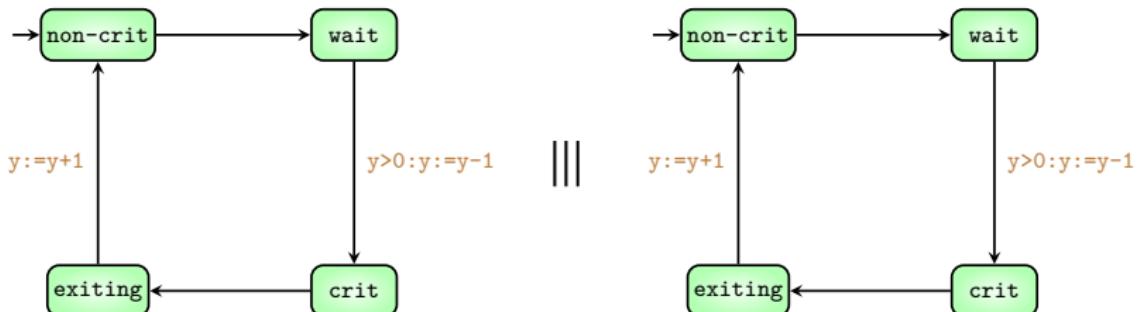

It does not satisfy **A F blue**

Mutual exclusion

Atomic propositions $AP = \{ p_1, p_2, p_3, p_4 \}$

p_1 : pr1.location=crit p_2 : pr1.location=wait

p_3 : pr2.location=crit p_4 : pr2.location=wait

Above system satisfies $\mathbf{A} \mathbf{G} \neg (p_1 \wedge p_3)$

Goal of this unit

Design an algorithm:

INPUT: A transition system M and a CTL formula ϕ

OUTPUT: Does M satisfy ϕ ?

Goal of this unit

Design an algorithm:

INPUT: A transition system M and a CTL formula ϕ

OUTPUT: Does M satisfy ϕ ?

We will answer a more general question:

Given M and ϕ , find all the states of M that satisfy ϕ

First step

State formulae

$$\phi := \text{true} \mid p_i \mid \phi_1 \wedge \phi_2 \mid \neg \phi_1 \mid E \alpha \mid A \alpha$$

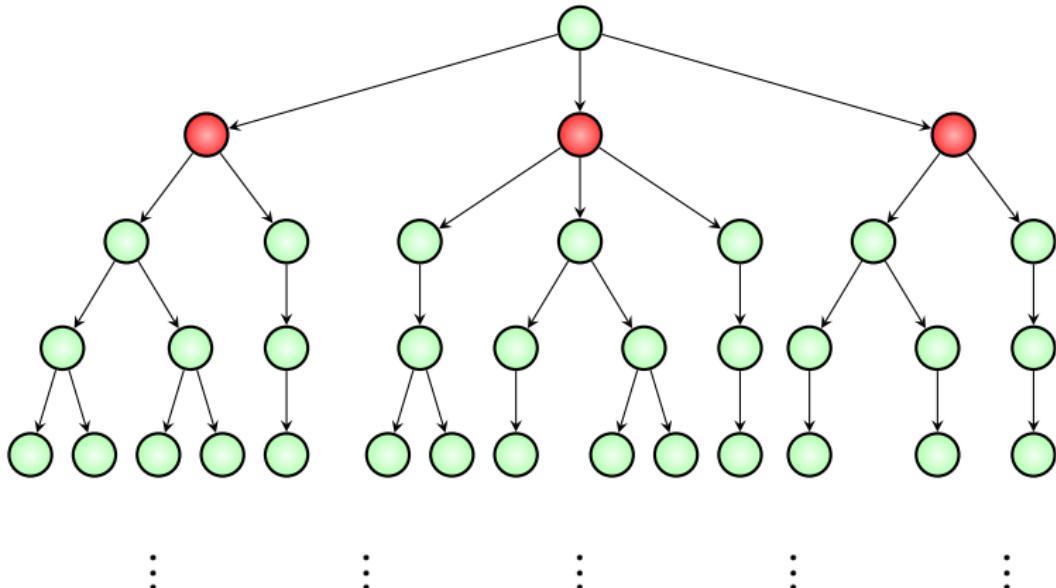

$p_i \in AP$ ϕ_1, ϕ_2 : State formulae α : Path formula

Path formulae

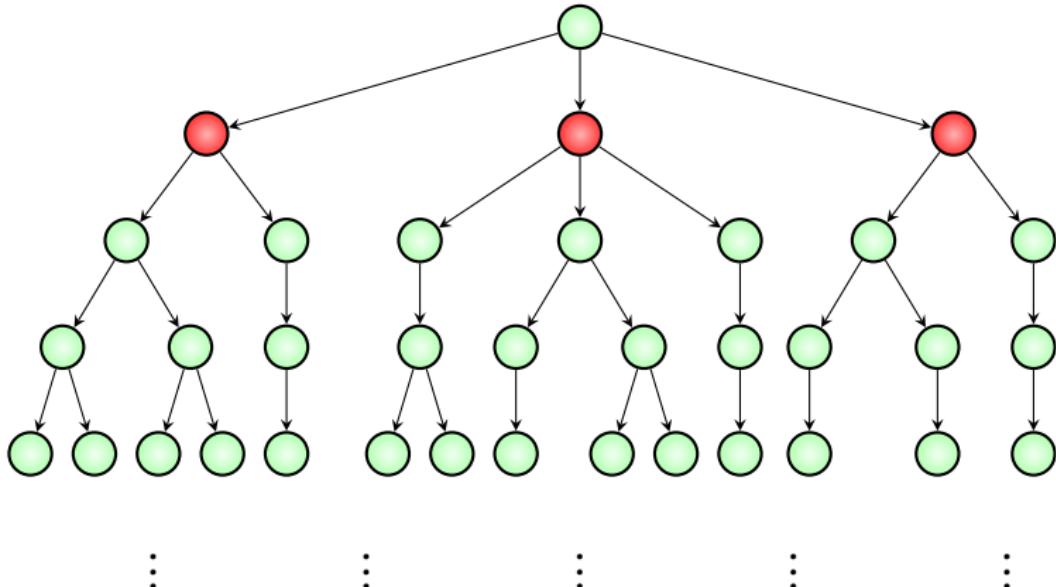

$$\alpha := X \phi_1 \mid \phi_1 U \phi_2 \mid F \phi_1 \mid G \phi_1$$

Rewrite **A** in terms of **E**

$\text{A } X \text{ (red)}$ equivalent to $\neg \text{E } X \text{ (} \neg \text{ red)}$

$\mathbf{A} \ X \ (\text{red})$ equivalent to $\neg \mathbf{E} \ X \ (\neg \text{red})$

$$\mathbf{A} \ X \phi \quad \equiv \quad \neg \mathbf{E} \ X \neg \phi$$

Can we rewrite $\mathbf{A}(\phi \mathbf{U} \psi)$ as $\neg \mathbf{E} \neg (\phi \mathbf{U} \psi)$?

Can we rewrite $\mathbf{A}(\phi \mathbf{U} \psi)$ as $\neg \mathbf{E} \neg (\phi \mathbf{U} \psi)$?

No: $\neg \mathbf{E} \neg (\phi \mathbf{U} \psi)$ is not a CTL formula

State formulae

$$\phi := \text{true} \mid p_i \mid \phi_1 \wedge \phi_2 \mid \neg \phi_1 \mid E \alpha \mid A \alpha$$

$p_i \in AP$ ϕ_1, ϕ_2 : State formulae α : Path formula

Path formulae

$$\alpha := X \phi_1 \mid \phi_1 U \phi_2 \mid F \phi_1 \mid G \phi_1$$

Can we rewrite $\mathbf{A}(\phi \mathbf{U} \psi)$ as $\neg \mathbf{E} \neg(\phi \mathbf{U} \psi)$?

No: $\neg \mathbf{E} \neg(\phi \mathbf{U} \psi)$ is not a CTL formula

State formulae

$$\phi := \text{true} \mid p_i \mid \phi_1 \wedge \phi_2 \mid \neg \phi_1 \mid E \alpha \mid A \alpha$$

$p_i \in AP$ ϕ_1, ϕ_2 : State formulae α : Path formula

Path formulae

$$\alpha := X \phi_1 \mid \phi_1 U \phi_2 \mid F \phi_1 \mid G \phi_1$$

CTL does not allow negation of path formula!

Coming next: Rewrite $\mathbf{A} \mathbf{U}$ in terms of $\mathbf{E} \mathbf{U}$ and $\mathbf{E} \mathbf{G}$

$\neg (\text{blue} \cup \text{red})$

$\neg (\text{blue} \cup \text{red})$

$\neg (\text{blue} \cup \text{red})$

$\mathbf{G} \neg \text{red}$

$\neg (\text{blue} \cup \text{red})$

$\mathbf{G} \neg \text{red}$

or

$\neg (\text{blue} \cup \text{red})$ $\mathbf{G} \neg \text{red}$ 

or

$$\neg (\text{blue} \mathbf{U} \text{red})$$

$$\mathbf{G} \neg \text{red}$$

or

$$(\neg \text{red}) \mathbf{U} (\neg \text{blue} \wedge \neg \text{red})$$

$$\neg (\text{blue} \mathbf{U} \text{red})$$

$$\mathbf{G} \neg \text{red}$$

or

$$(\neg \text{red}) \mathbf{U} (\neg \text{blue} \wedge \neg \text{red})$$

$$\neg (\phi \mathbf{U} \psi) \equiv \mathbf{G} \neg \psi \vee (\neg \psi \mathbf{U} (\neg \phi \wedge \neg \psi))$$

$$\mathbf{A}(\phi \mathbf{U} \psi)$$

$$\mathbf{A}(\phi \mathbf{U} \psi)$$

\equiv

$$\neg \mathbf{E} \neg (\phi \mathbf{U} \psi)$$

$\mathbf{A}(\phi \mathbf{U} \psi)$ \equiv $\neg \mathbf{E} \neg (\phi \mathbf{U} \psi)$

(Not a CTL formula)

$$\mathbf{A}(\phi \mathbf{U} \psi)$$

\equiv

$$\neg \mathbf{E} \neg (\phi \mathbf{U} \psi)$$

(Not a CTL formula)

\equiv

$$\neg (\mathbf{E} \mathbf{G} \neg \psi \vee \mathbf{E} (\neg \psi \mathbf{U} (\neg \psi \wedge \neg \phi)))$$

$$\mathbf{A}(\phi \mathbf{U} \psi)$$

\equiv

$$\neg \mathbf{E} \neg (\phi \mathbf{U} \psi)$$

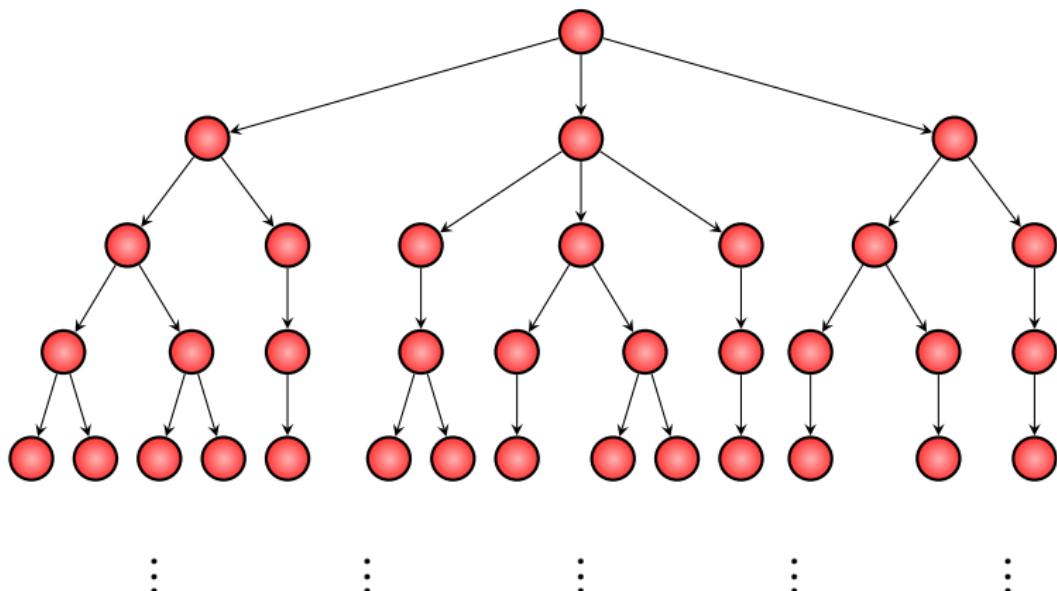

(Not a CTL formula)

\equiv

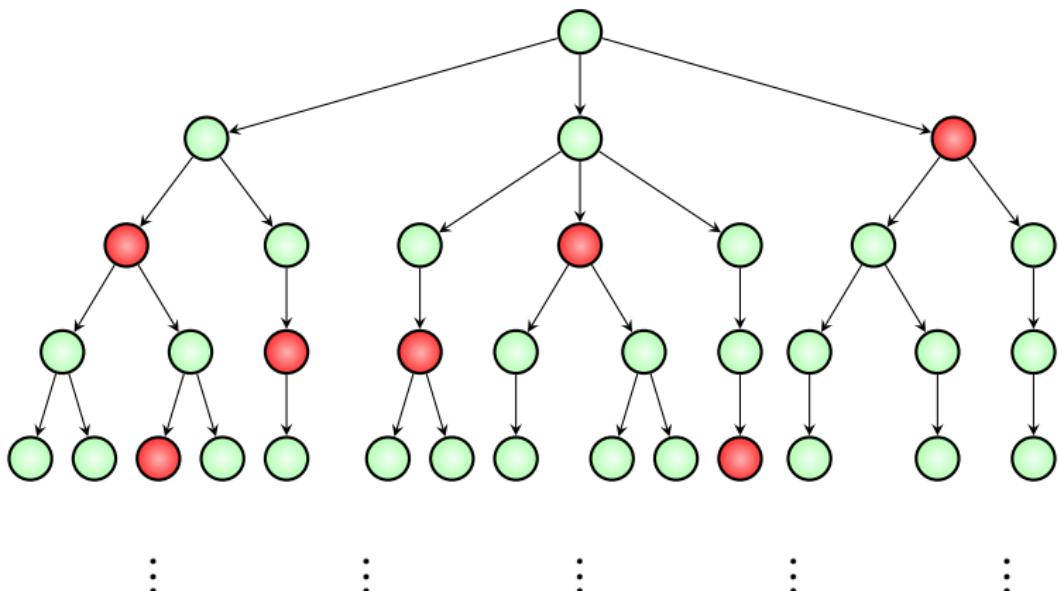

$$\neg (\mathbf{E} \mathbf{G} \neg \psi \vee \mathbf{E} (\neg \psi \mathbf{U} (\neg \psi \wedge \neg \phi)))$$

(A CTL formula!)

$A \text{ G } (\text{red})$ equivalent to $\neg E \text{ F } (\neg \text{red})$

$\text{A F } (\text{red})$ equivalent to $\neg \text{E G } (\neg \text{red})$

First step

State formulae

$$\phi := \text{true} \mid p_i \mid \phi_1 \wedge \phi_2 \mid \neg \phi_1 \mid E \alpha \mid A \alpha$$

$p_i \in AP$ ϕ_1, ϕ_2 : State formulae α : Path formula

Path formulae

$$\alpha := X \phi_1 \mid \phi_1 U \phi_2 \mid F \phi_1 \mid G \phi_1$$

Rewrite **A** in terms of **E**

First step

State formulae

$$\phi := \text{true} \mid p_i \mid \phi_1 \wedge \phi_2 \mid \neg \phi_1 \mid E \alpha \mid A \alpha$$

$p_i \in AP$ ϕ_1, ϕ_2 : State formulae α : Path formula

Path formulae

$$\alpha := X \phi_1 \mid \phi_1 U \phi_2 \mid F \phi_1 \mid G \phi_1$$

Rewrite A in terms of E **Done!**

All CTL formulas can be written in terms of

E X , E U , E G and E F

All CTL formulas can be written in terms of

$\mathbf{E} \mathbf{X}$, $\mathbf{E} \mathbf{U}$, $\mathbf{E} \mathbf{G}$ and $\mathbf{E} \mathbf{F}$

Moreover $\mathbf{E} \mathbf{F} \phi \equiv \mathbf{E} (\text{true} \mathbf{U} \phi)$

All CTL formulas can be written in terms of

$\mathbf{E}\ \mathbf{X}$, $\mathbf{E}\ \mathbf{U}$, $\mathbf{E}\ \mathbf{G}$ and $\mathbf{E}\ \mathbf{F}$

Moreover $\mathbf{E}\ \mathbf{F}\ \phi \equiv \mathbf{E} (\text{true} \mathbf{U} \phi)$

$\mathbf{E}\ \mathbf{X}$, $\mathbf{E}\ \mathbf{U}$ and $\mathbf{E}\ \mathbf{G}$ are adequate to describe all CTL formulas

Existential Normal Form (ENF) for CTL

State formulae

$$\phi := \text{true} \mid p_i \mid \phi_1 \wedge \phi_2 \mid \neg\phi \mid EX \phi \mid E(\phi_1 U \phi_2) \mid EG \phi$$
 $p_i \in AP$ $\phi, \phi_1, \phi_2 : \text{State formulae}$

Existential Normal Form (ENF) for CTL

State formulae

$$\phi := \text{true} \mid p_i \mid \phi_1 \wedge \phi_2 \mid \neg\phi \mid EX\phi \mid E(\phi_1 U \phi_2) \mid EG\phi$$
 $p_i \in AP$ $\phi, \phi_1, \phi_2 : \text{State formulae}$

Theorem

For every CTL formula there exists an equivalent CTL formula in ENF

Module 2: **EX, EU and EG**

CTL model-checking problem

Given transition system M and a CTL formula ϕ , find all states of M that satisfy ϕ

CTL model-checking problem

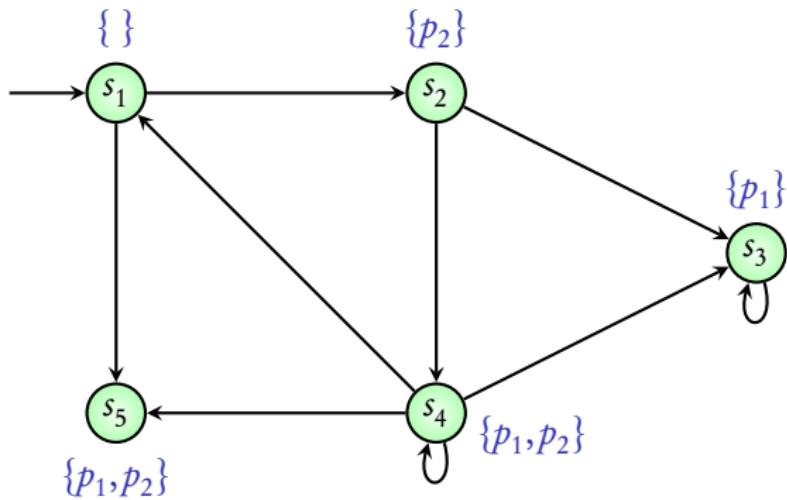

Given transition system M and a CTL formula ϕ , find all states of M that satisfy ϕ

In this unit: Special case when ϕ is either E X, E U or E G

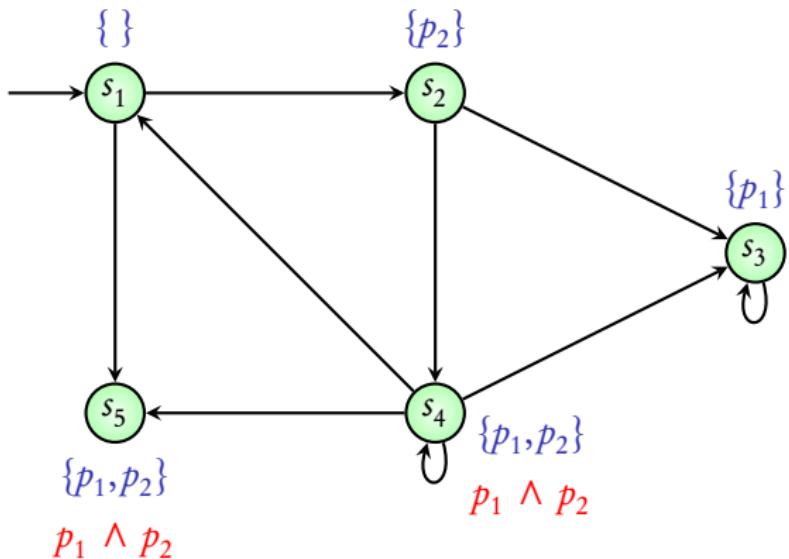

Part 1:

Algorithm for E X

$$\mathbf{E} \mathbf{X} (p_1 \wedge p_2)$$

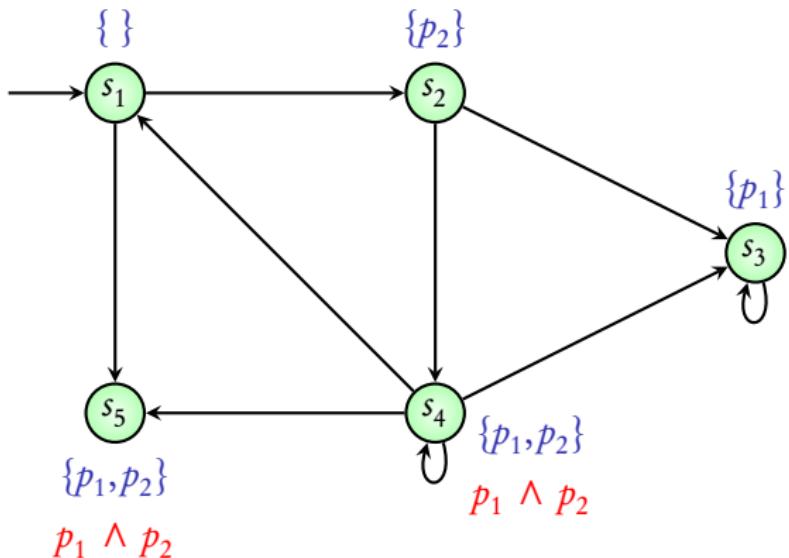

$$\mathbf{E} \mathbf{X} (p_1 \wedge p_2)$$

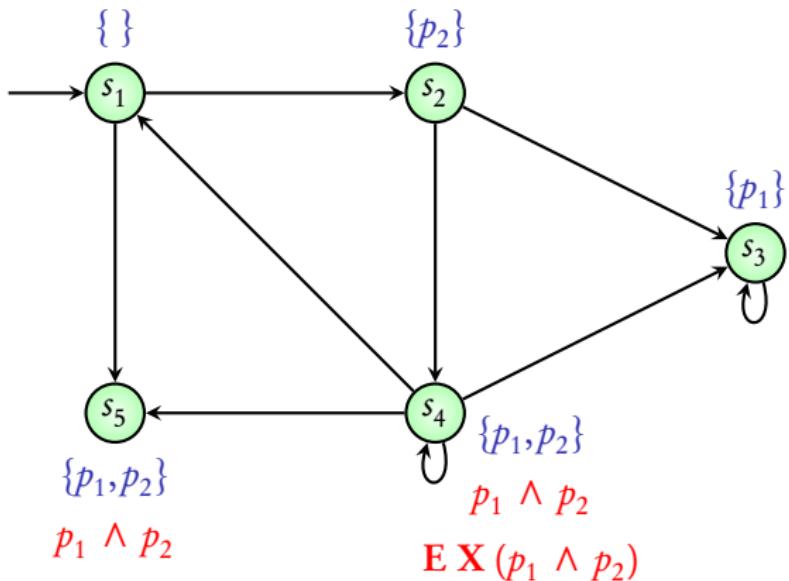

$$\mathbf{E} \mathbf{X} (p_1 \wedge p_2)$$

$$\mathbf{E} \mathbf{X} (p_1 \wedge p_2)$$

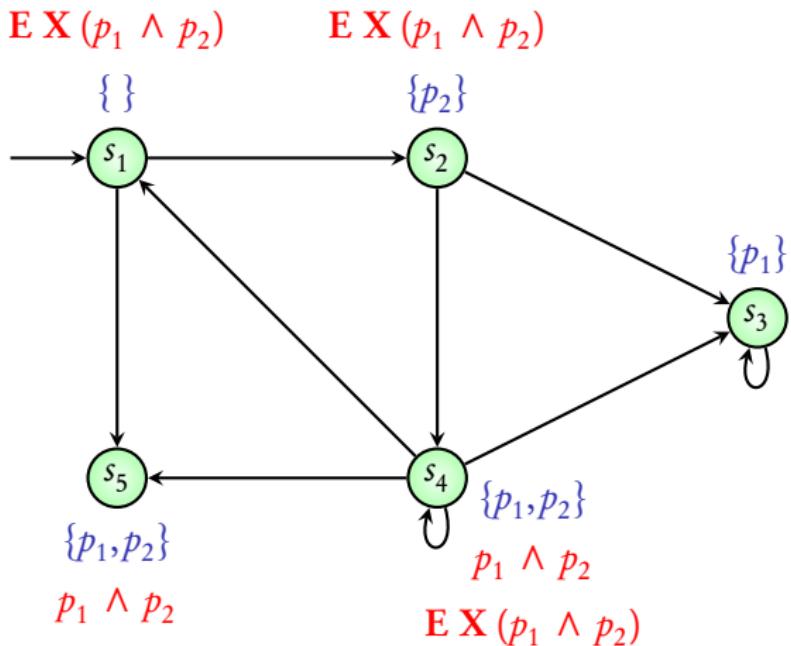

$$\mathbf{E} \mathbf{X} (p_1 \wedge p_2)$$

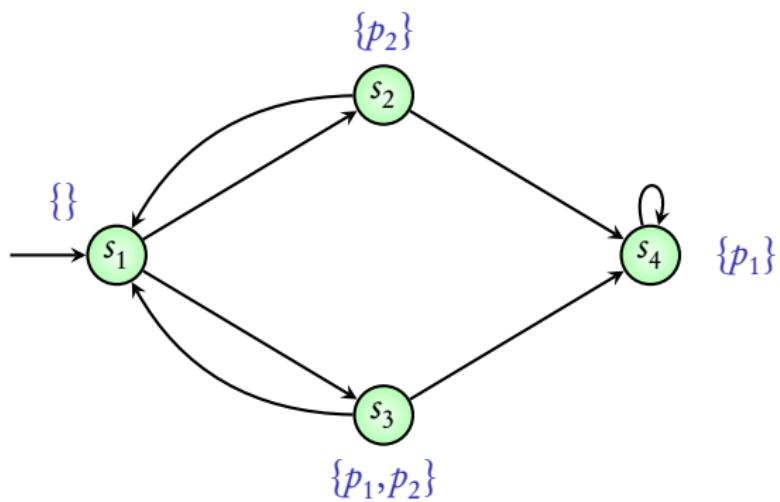

$$\mathbf{E} \mathbf{X} (p_1 \wedge p_2)$$

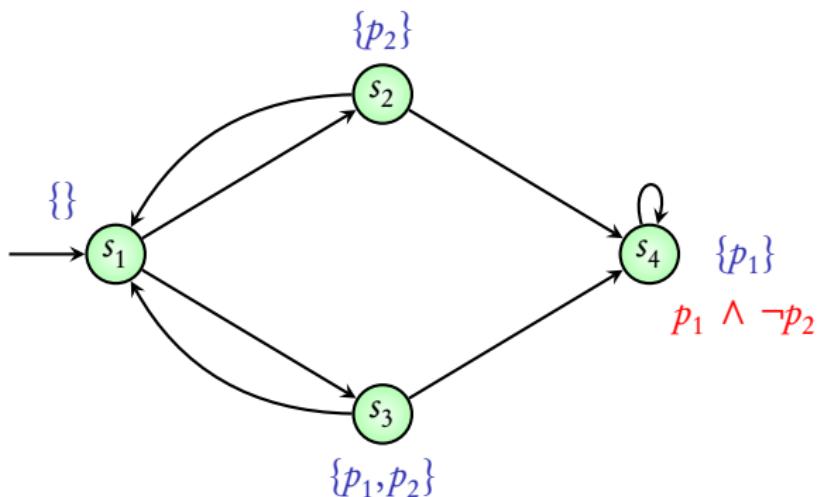

$$\mathbf{E} \mathbf{X} (p_1 \wedge p_2)$$

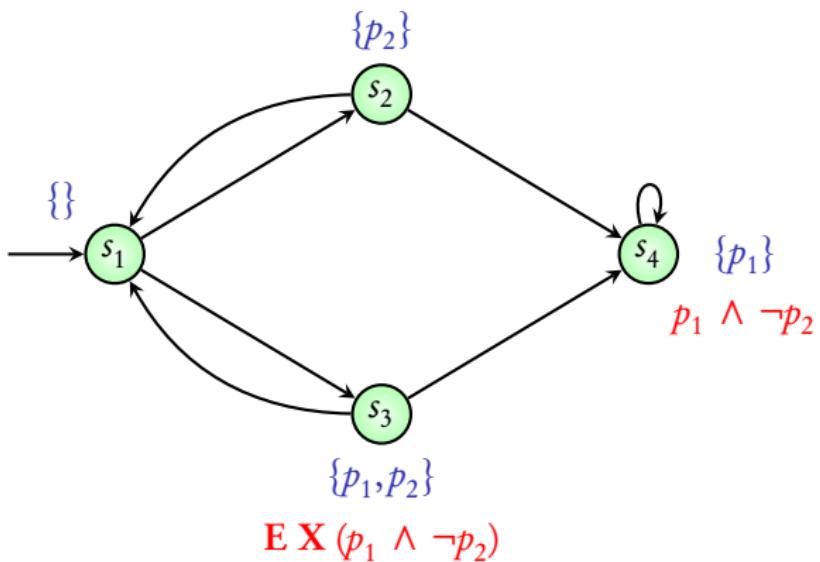

$$\mathbf{E} \, \mathbf{X} \, (p_1 \wedge \neg p_2)$$

$$\mathbf{E} \, \mathbf{X} \, (p_1 \wedge \neg p_2)$$

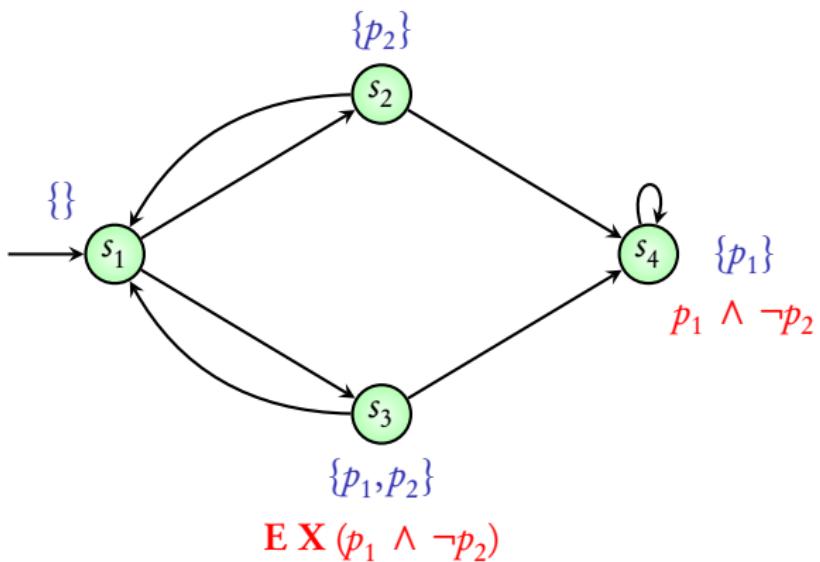

$$\mathbf{E} \, \mathbf{X} \, (p_1 \wedge \neg p_2)$$

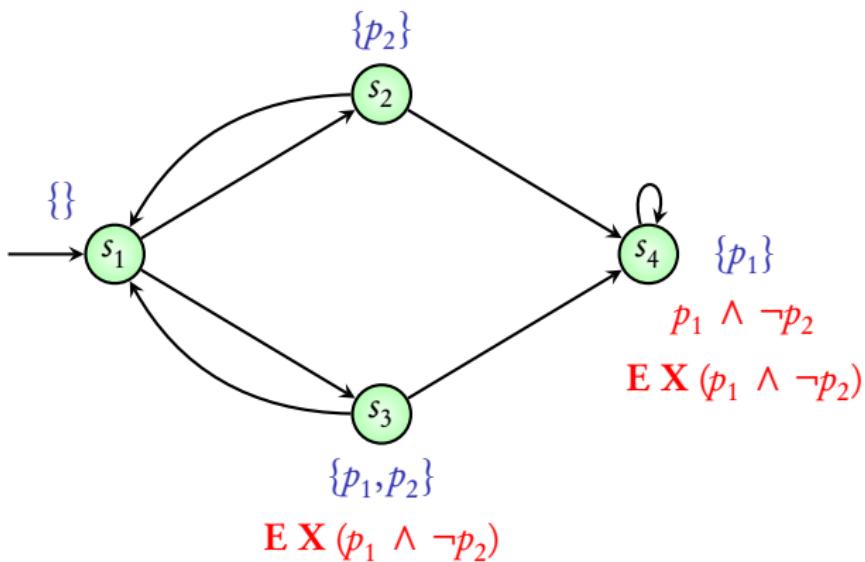

$$\mathbf{E} \mathbf{X} (p_1 \wedge \neg p_2)$$

$$\mathbf{E} \mathbf{X} (p_1 \wedge \neg p_2)$$

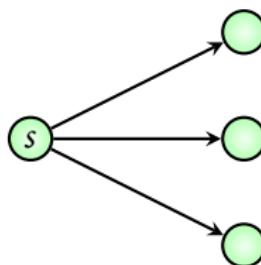

$$\mathbf{E} \mathbf{X} (p_1 \wedge \neg p_2)$$

$$\mathbf{E} \mathbf{X} (p_1 \wedge \neg p_2)$$

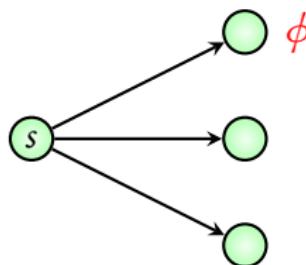

Algorithm for $E \times \phi$

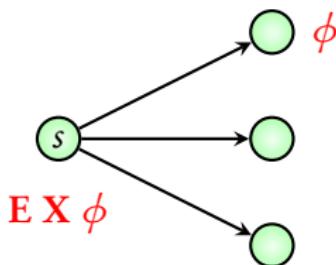

Algorithm for $E \times \phi$

Suppose states satisfying ϕ have been labelled

Algorithm for $E X \phi$

Suppose states satisfying ϕ have been labelled

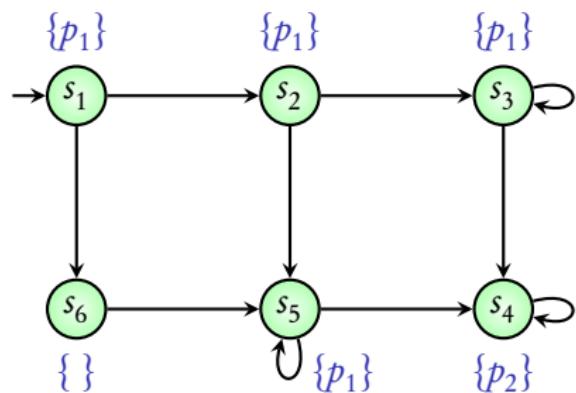

State s is labelled with $E X \phi$ if there **exists a successor** which is labelled ϕ

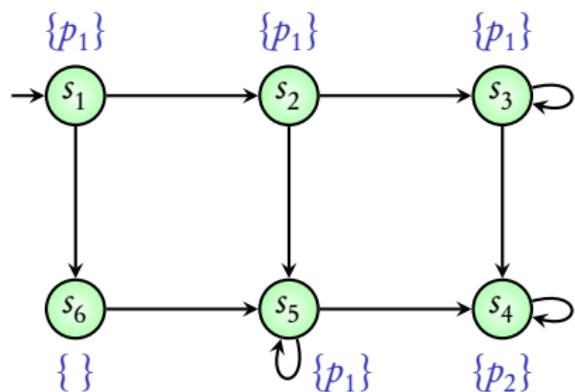

Part 2:

Algorithm for E U

$$\mathbf{E}(p_1 \mathbf{U} p_2)$$

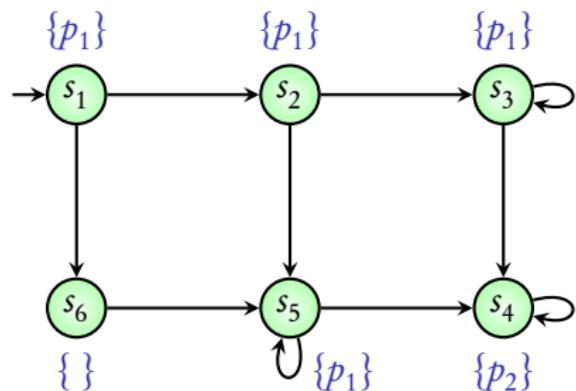

$$\mathbf{E} (p_1 \mathbf{U} p_2)$$

$$\mathbf{E} p_1 \mathbf{U} p_2$$

$$\mathbf{E} (p_1 \mathbf{U} p_2)$$

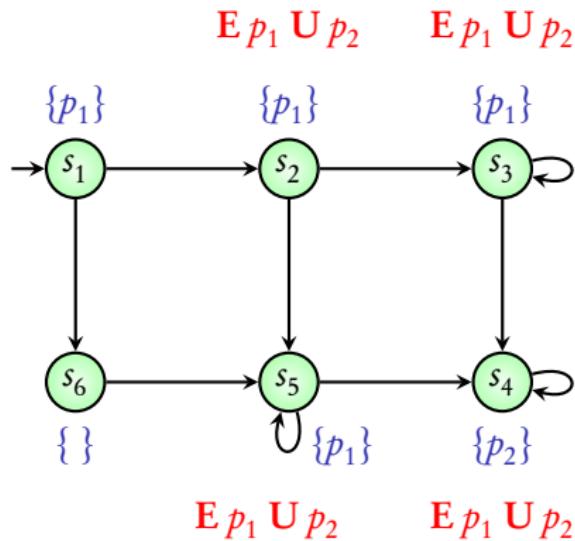

$$\mathbf{E} p_1 \mathbf{U} p_2$$

$$\mathbf{E} p_1 \mathbf{U} p_2$$

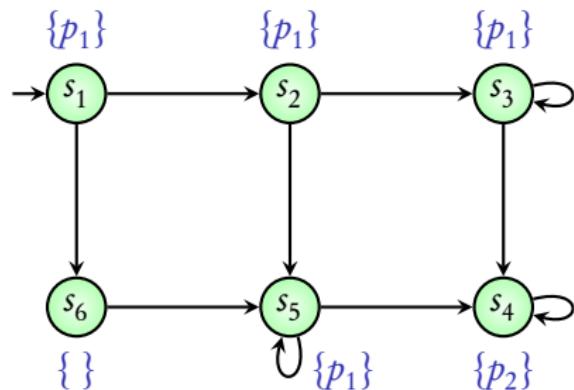

$$\mathbf{E} p_1 \mathbf{U} p_2$$

$$\mathbf{E} (p_1 \mathbf{U} p_2)$$

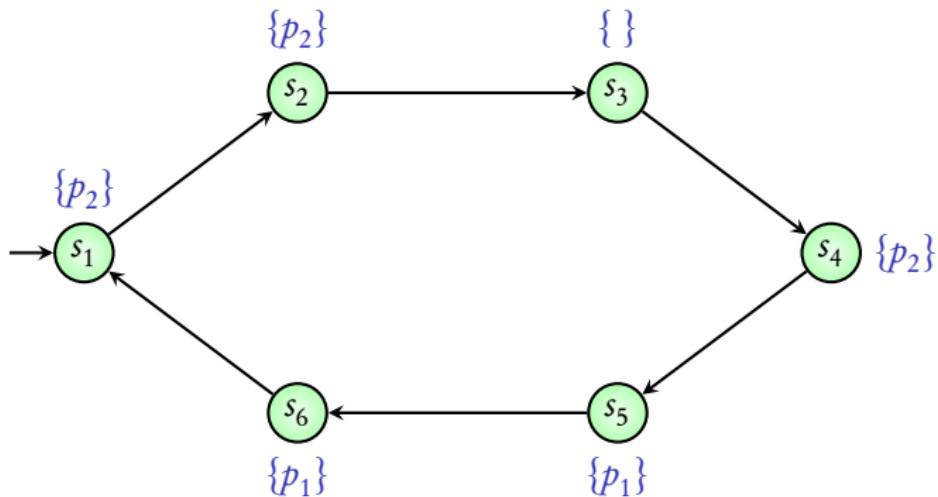

$$\mathbf{E} (p_1 \mathbf{U} p_2)$$

$$\mathbf{E} p_1 \mathbf{U} p_2 \quad \mathbf{E} p_1 \mathbf{U} p_2 \quad \mathbf{E} p_1 \mathbf{U} p_2$$

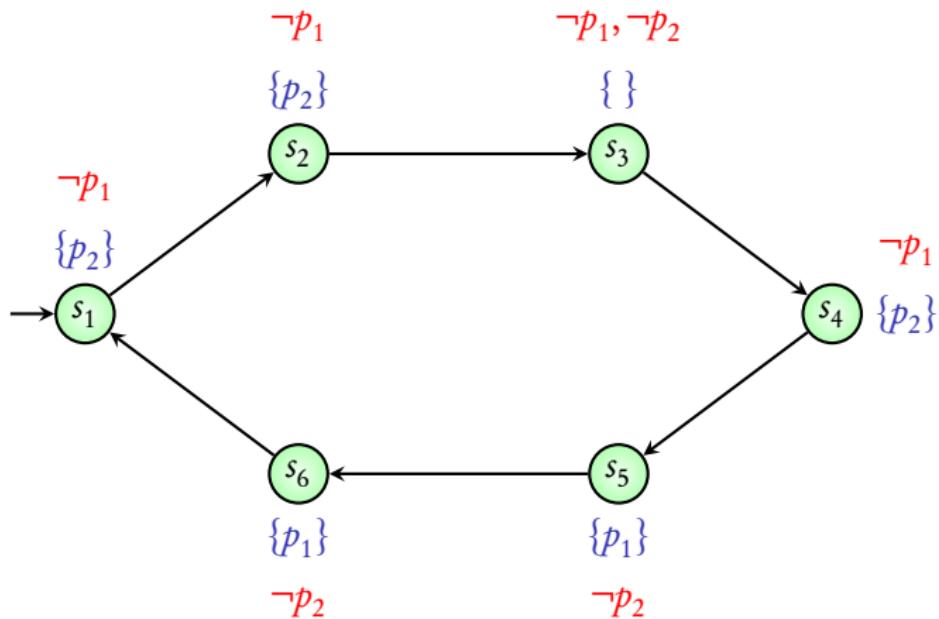

$$\mathbf{E} p_1 \mathbf{U} p_2 \quad \mathbf{E} p_1 \mathbf{U} p_2$$

$$\mathbf{E} (\neg p_1 \mathbf{U} \neg p_2)$$

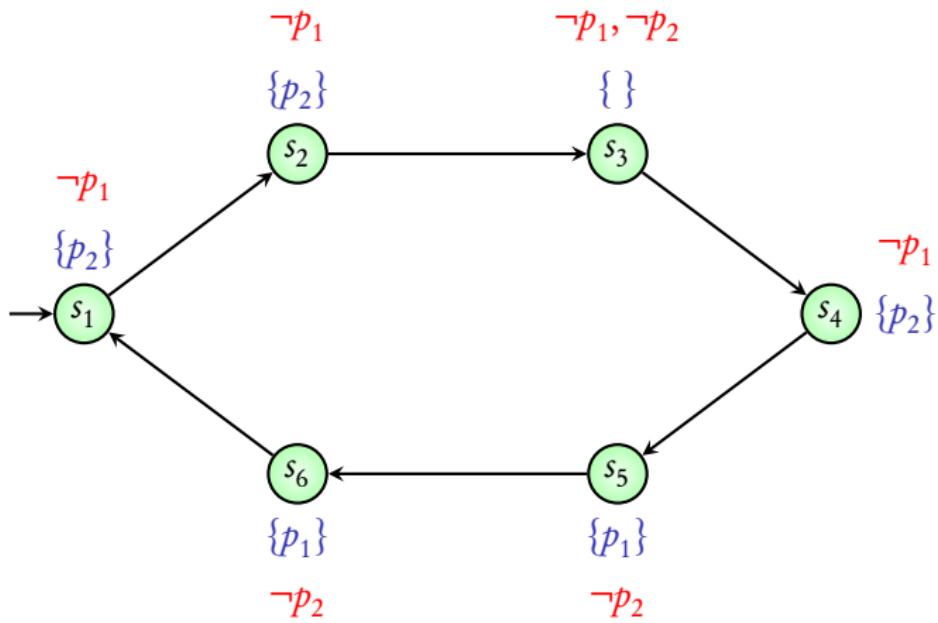

$$\mathbf{E} (\neg p_1 \mathbf{U} \neg p_2)$$

$$E(\neg p_1 \cup \neg p_2)$$

$$E(\neg p_1 \cup \neg p_2)$$

$$E(\neg p_1 \cup \neg p_2)$$

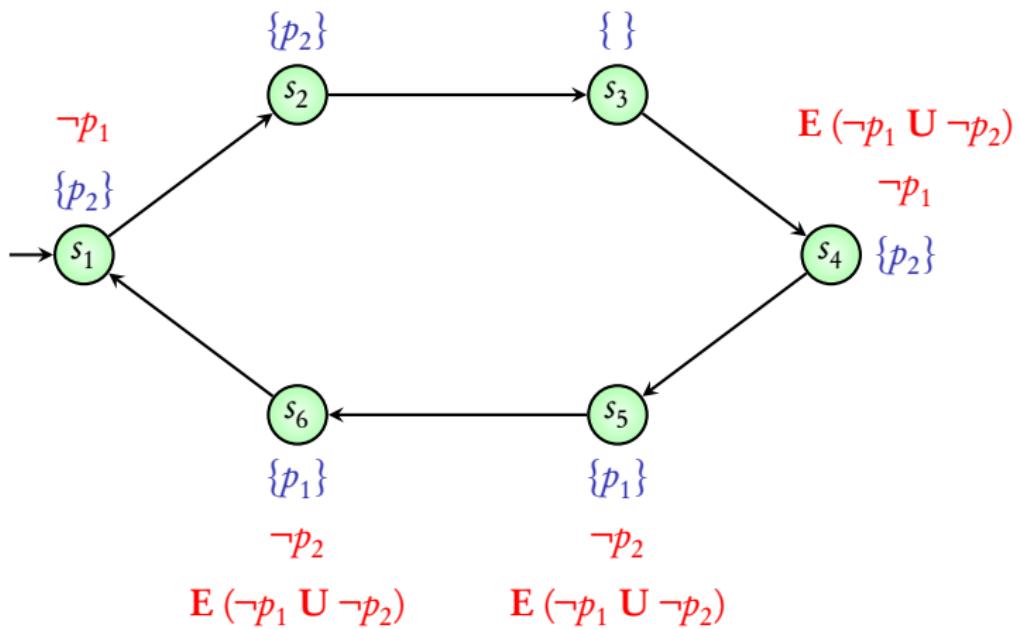

$$\neg p_1$$

$$\{p_2\}$$

$$E(\neg p_1 \cup \neg p_2)$$

$$\neg p_1, \neg p_2$$

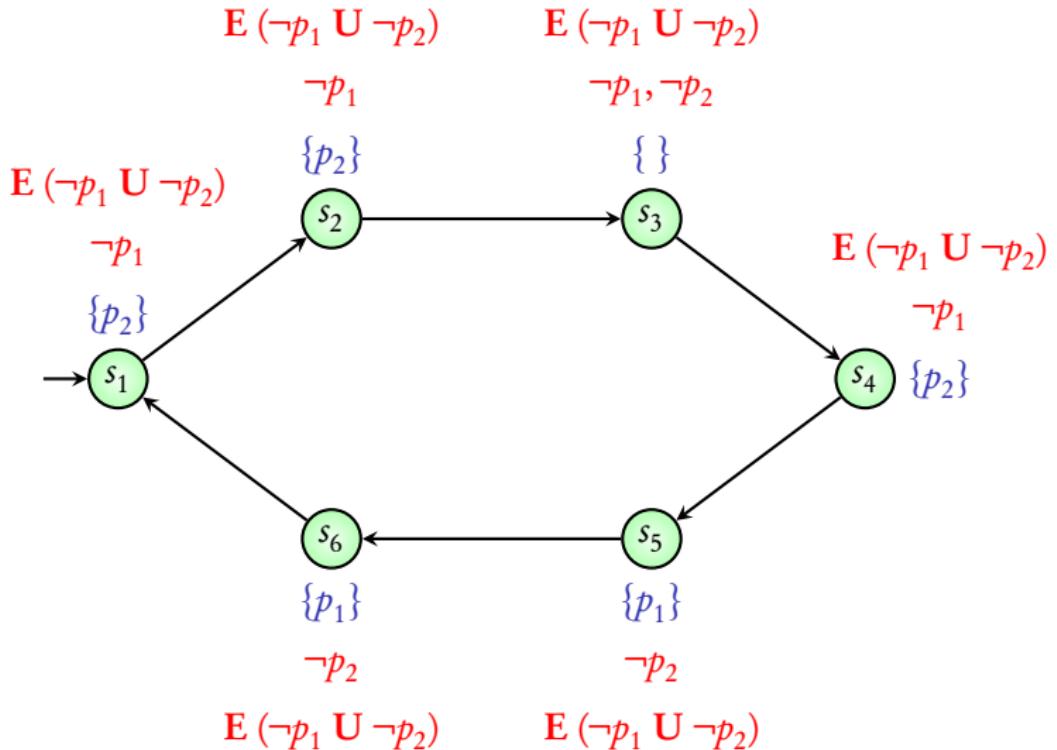

$$\{ \}$$

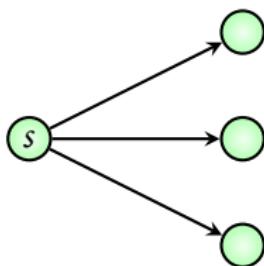

$$E(\neg p_1 \cup \neg p_2)$$

$$E(\neg p_1 \cup \neg p_2)$$

$$E(\neg p_1 \cup \neg p_2)$$

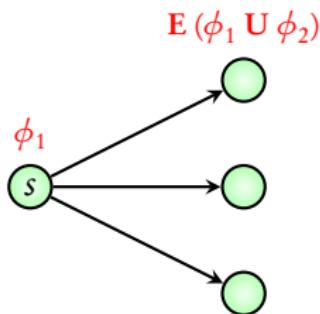

Algorithm for $E(\phi_1 \cup \phi_2)$

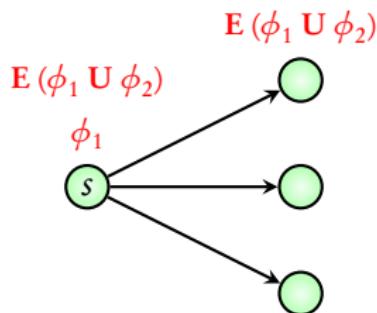

- ▶ If any state is labelled with ϕ_2 , label it with $E(\phi_1 \cup \phi_2)$
- ▶ *Repeat:*
Label any state with $E(\phi_1 \cup \phi_2)$ if it is labelled with ϕ_1 and at least one successor is labelled with $E(\phi_1 \cup \phi_2)$
until no change

Algorithm for $E(\phi_1 \cup \phi_2)$

- ▶ If any state is labelled with ϕ_2 , label it with $E(\phi_1 \cup \phi_2)$
- ▶ *Repeat:*
Label any state with $E(\phi_1 \cup \phi_2)$ if it is labelled with ϕ_1 and at least one successor is labelled with $E(\phi_1 \cup \phi_2)$
until no change

Algorithm for $E(\phi_1 \cup \phi_2)$

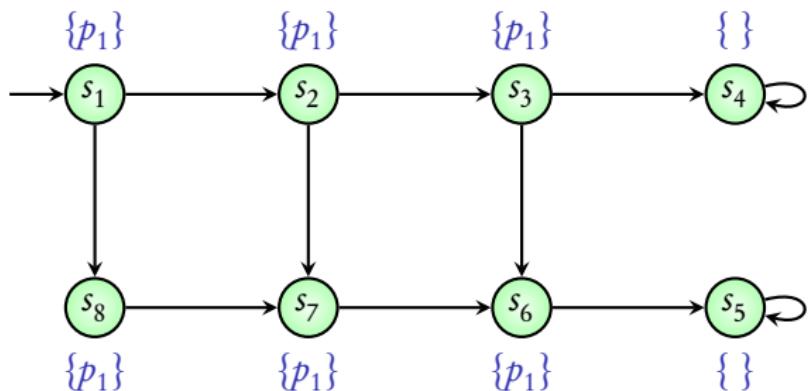

- ▶ If any state is labelled with ϕ_2 , label it with $E(\phi_1 \cup \phi_2)$
- ▶ *Repeat:*
Label any state with $E(\phi_1 \cup \phi_2)$ if it is labelled with ϕ_1 and at least one successor is labelled with $E(\phi_1 \cup \phi_2)$
until no change

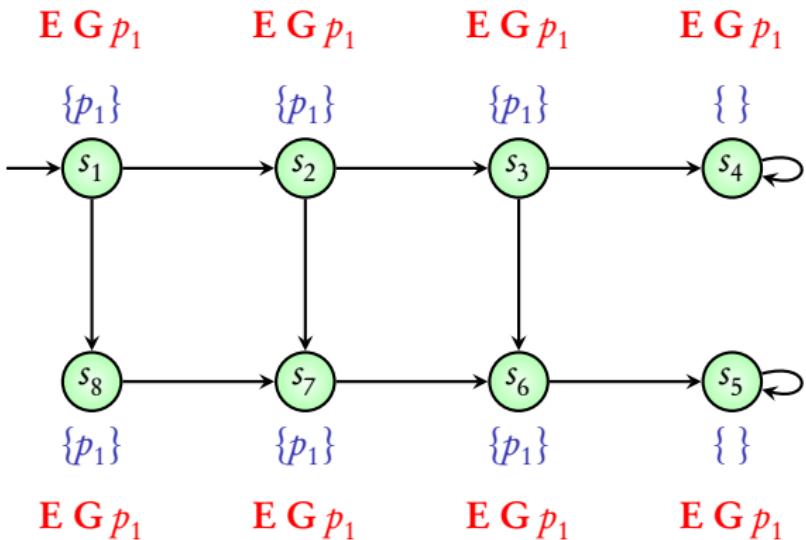

Part 3:

Algorithm for E G

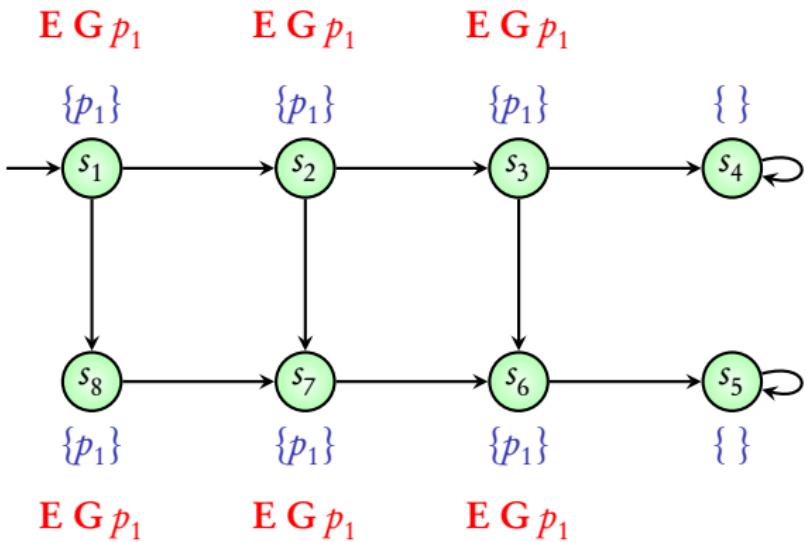

$\mathbf{E} \mathbf{G} p_1$

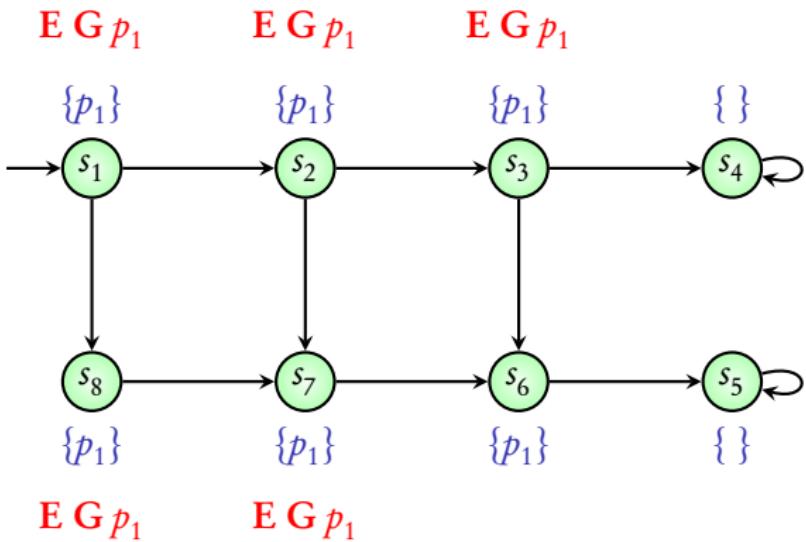

$\mathbf{E} \mathbf{G} p_1$

$\mathbf{E} \mathbf{G} p_1$

$\mathbf{E} \mathbf{G} p_1$

$\mathbf{E} \mathbf{G} p_1$

$\mathbf{E} \mathbf{G} p_1$

$\{p_1\}$

$\{p_1\}$

$\{\}$

$\{p_1\}$

$\{p_1\}$

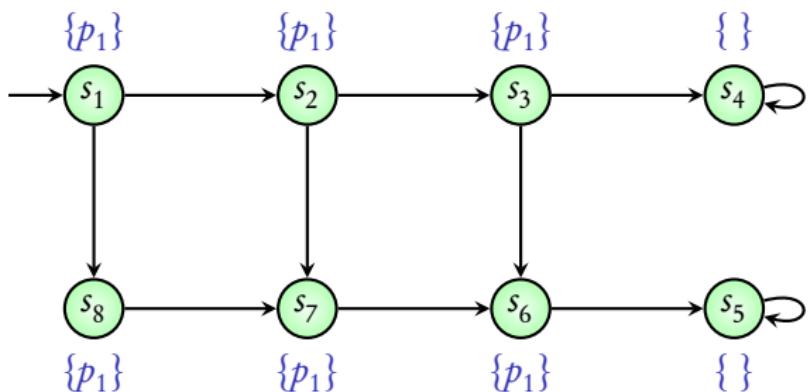

$\{p_1\}$

$\{\}$

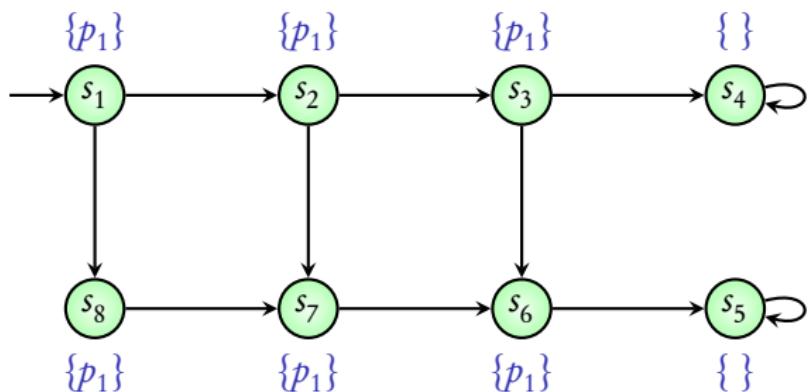

$\mathbf{E} \mathbf{G} p_1$

$\mathbf{E} \mathbf{G} p_1$

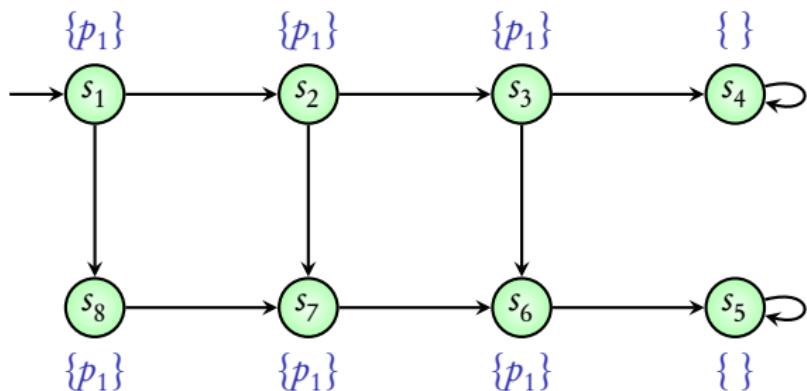

$\mathbf{E} \mathbf{G} p_1$

$\mathbf{E} \mathbf{G} p_1$

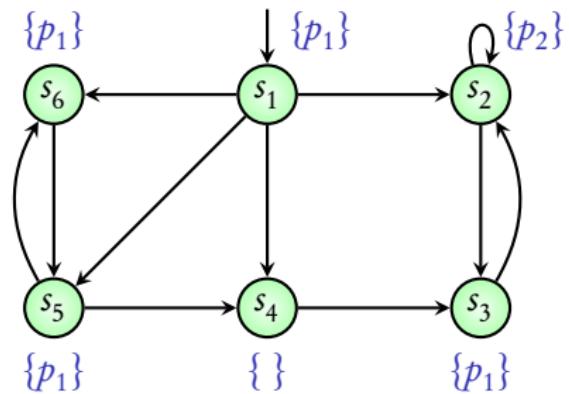

$\mathbf{E} \mathbf{G} p_1$

No state of the above transition system satisfies $\mathbf{E} \mathbf{G} p_1$

$\mathbf{E} \mathbf{G} p_1$

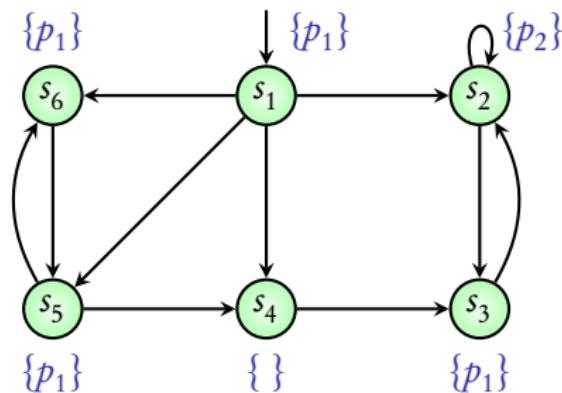

$\mathbf{E} \mathbf{G} p_1$

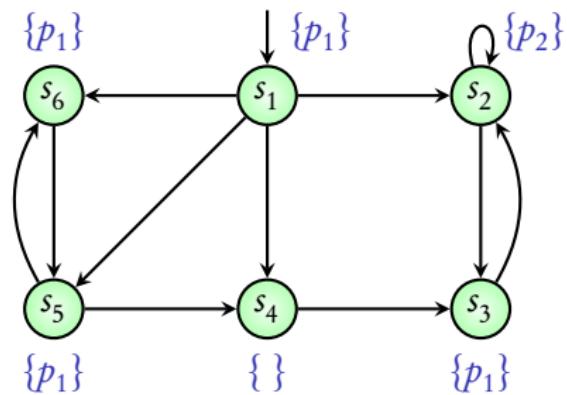

$\mathbf{E} \mathbf{G} p_1$

$\mathbf{E} \mathbf{G} p_1$

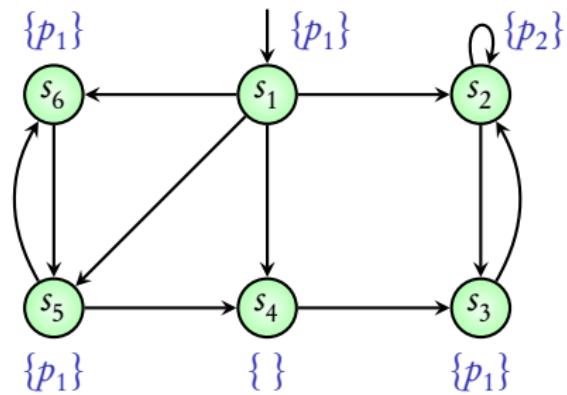

$\mathbf{E} \mathbf{G} p_1$

$\mathbf{E} \mathbf{G} p_1$

$\mathbf{E} \mathbf{G} p_1$

$\mathbf{E} \mathbf{G} p_1$

Algorithm for E G ϕ

Algorithm for $\mathbf{E} \mathbf{G} \phi$

- ▶ Label all states with $\mathbf{E} \mathbf{G} \phi$

Algorithm for $\mathbf{E} \mathbf{G} \phi$

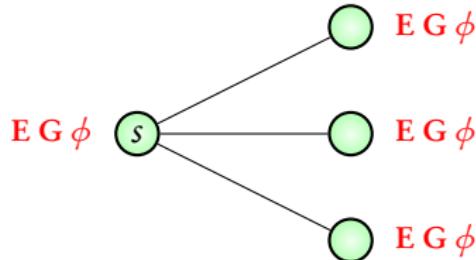

- ▶ Label all states with $\mathbf{E} \mathbf{G} \phi$
- ▶ If any state is **not** labelled with ϕ , **delete** the label $\mathbf{E} \mathbf{G} \phi$

Algorithm for $\mathbf{E} \mathbf{G} \phi$

- ▶ Label all states with $\mathbf{E} \mathbf{G} \phi$
- ▶ If any state is **not** labelled with ϕ , **delete** the label $\mathbf{E} \mathbf{G} \phi$
- ▶ *Repeat:*
Delete the label $\mathbf{E} \mathbf{G} \phi$ from a state if **none** of its successors is labelled with $\mathbf{E} \mathbf{G} \phi$
until no change

Algorithm for $\mathbf{E} \mathbf{G} \phi$

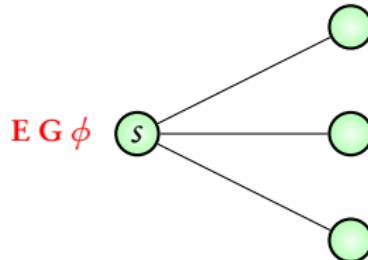

- ▶ Label all states with $\mathbf{E} \mathbf{G} \phi$
- ▶ If any state is **not** labelled with ϕ , **delete** the label $\mathbf{E} \mathbf{G} \phi$

- ▶ *Repeat:*
Delete the label $\mathbf{E} \mathbf{G} \phi$ from a state if **none** of its successors is labelled with $\mathbf{E} \mathbf{G} \phi$
until no change

Algorithm for $\text{E } \mathbf{G } \phi$

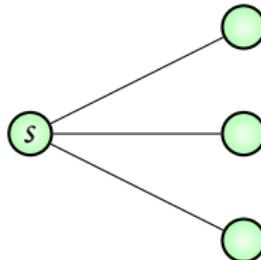

- ▶ Label all states with $\text{E } \mathbf{G } \phi$
- ▶ If any state is **not** labelled with ϕ , **delete** the label $\text{E } \mathbf{G } \phi$

- ▶ *Repeat:*
Delete the label $\text{E } \mathbf{G } \phi$ from a state if **none** of its successors is labelled with $\text{E } \mathbf{G } \phi$
until no change

Algorithm for $\text{E } \mathbf{G } \phi$

- ▶ Label all states with $\text{E } \mathbf{G } \phi$
- ▶ If any state is **not** labelled with ϕ , **delete** the label $\text{E } \mathbf{G } \phi$

- ▶ *Repeat:*
Delete the label $\text{E } \mathbf{G } \phi$ from a state if **none** of its successors is labelled with $\text{E } \mathbf{G } \phi$
until no change

Summary

Algorithms

EX, EU, EG

Module 3: Final algorithm

CTL model-checking problem

Given transition system M and a CTL formula ϕ , find all states of M that satisfy ϕ

CTL model-checking problem

Given transition system M and a CTL formula ϕ , find all states of M that satisfy ϕ

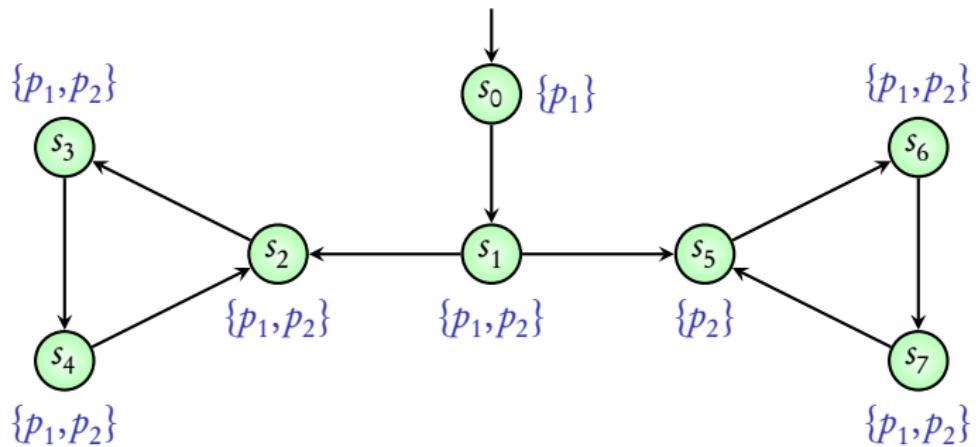

- ▶ **Module 1:** Every CTL formula can be written using EX, EU, EG
- ▶ **Module 2:** Labelling algorithms for EX, EU, EG

Coming next: Generic algorithm for a CTL formula

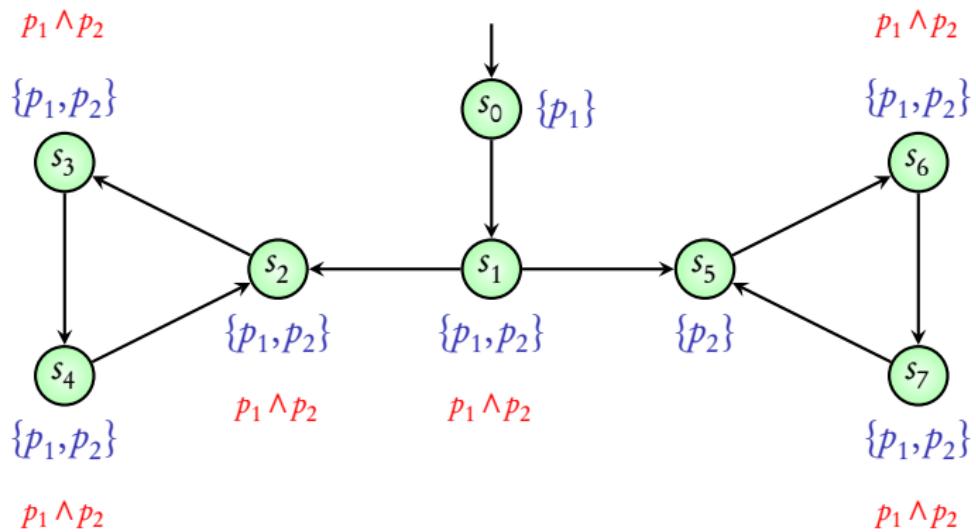

State formulae
